
SRC project Fall 2025

Seed inventory and management system

Introduction

Our mission:
To Aide the Lopez Urban farm
(3)

What's the problem?

- The Lopez Farm deals with many issues day to day
 - No electricity
 - Inventory of produce given
 - Lack of postage for crops/plots
- The one we're tackling
 - Managing Seed Plots & Timing Harvests
 - Which plants are in which plots?
 - When were they planted?
 - When should we start looking for harvest?

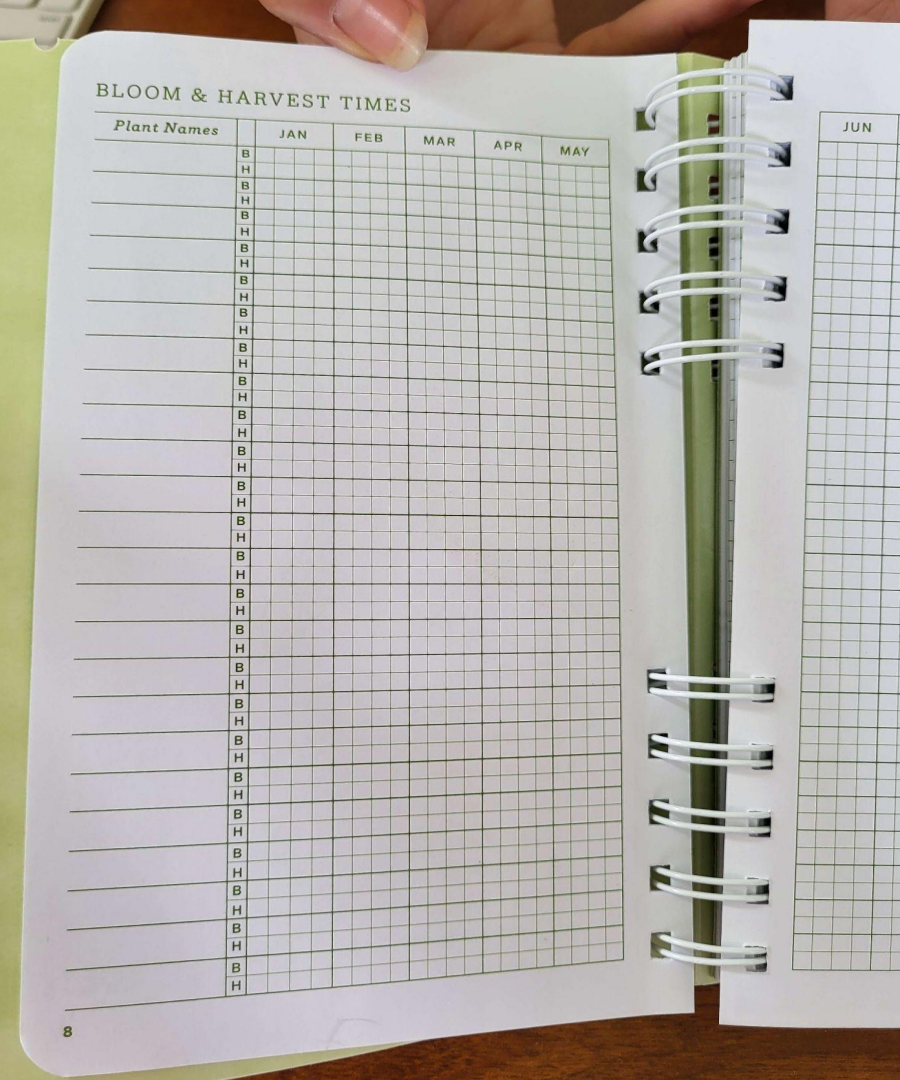

What's our solution?

A Glorious App!

- Input seeds in which plots to keep track in spreadsheet
- Utilize imputed data to calculate average harvesting time
- Potentially integrate with weather-tracking API to utilized humidity and sunlight levels to adjust calculated harvest times
- Potentially notifications for which plots to be harvested!

Visualization

Director of Operations
Bianca Ustrell

Visualization

```
public class Crop
{
    private String cropName;
    private int currentAmount;
    private int manualAverageCropPeriod;
    private GrowingSeasons growingSeason;
```

Array of Crops

crop	Seed count	Crop period	Growing season	...
Cabbage	12	120 days	Spring	...
Corn	0	74 days	summer	...
Tomato	20	100 days	Spring	...

How did it go?

Well... The Perfect Terrible Storm

- Time wasn't on our side...
- Other projects/schoolwork took precedent
- Unfamiliarity with Spring boot slowed production
- A general lack of direction/clear tasks

What went wrong?

Ultimately, failure of leadership, drive, and over ambition.

- Leadership - Overall Disorganized
- Drive - Desire Waning, especially with other priorities
- Over Ambition - Goals too large for too little time

Where do we go from here?

Features to be implemented:

- **GUI interface**
 - Read crops already inputted
 - Add new crops
 - edit/delete crops
 - Save/load files
- **A functional main method**
- **Save/Load function**
 - Hashing of data
- **Methods to calculate average harvest time based on input**
- **More private fields for Crop class**

We as a team have decided to continue to work on this project until it has been completed, at the very least delivering a functioning program that works on IOS devices that can competently manage seed inventory.

Thoughts of the team members

Danny

I feel like I've learned a lot from this project even though we weren't able to finish on time I am committed to figuring out how what I need to do to get this project done on my own time.

Jason

While I personally wasn't able to contribute much in terms of code, being in a group environment, and especially in a place where I could contribute in other ways besides coding, was quite insightful

Lessons learned

- Steady, fractional progress is not only good work ethic, but rejuvenates faith in a project
- Never wait to start, start immediately
- It is important to itemize meaningful, achievable tasks, or assign roles when working in groups
- College is a great time to try and fail
- The professional world finds failure costly
